

Residential Zero Energy Ready Homes

▪ Explore basic design considerations required to achieve low-load and high-performance homes and identify construction techniques and best practices that are critical to achieve extremely low energy consumption.

HALF DAY WORKSHOP

Envelope & Building Science - We will focus on the building enclosure in residential remodel/renovation and new construction projects. Participants will learn about best practice strategies for building assemblies, from foundations through roofs. Using case studies, exercises, and discussion we will show proven methods that have enabled builders and designers to build cost effective high-performance homes. Information about Zero Energy Homes, Zero Energy Ready Homes and Codes will also be shared.
